

Managed Information Security Program (MISP)

A Proactive Approach to Protecting Your Organization

Security drives how modern organizations operate and grow. At Mainstay, our fully managed Information Security Program brings together advanced security operations and risk-aligned strategy to protect your data, support compliance, and keep your business moving with confidence.

Risk & Compliance Management

- **Periodic Risk Assessments** – Identify vulnerabilities, assess risk levels, and receive actionable recommendations to close security gaps.
- **Compliance Alignment** – Ensure your organization meets federal, state, and vendor compliance requirements, including best practices for data privacy and contractual security obligations.
- **Policy & Workflow Development** – Build and maintain security policies that reinforce secure organizational workflows and adapt to evolving compliance needs.

Security Awareness & Prevention

- **User Security Training** – Standard and customized security training, delivered online or in-person, to educate employees on best practices.
- **Quarterly Phishing Assessments** – Simulated phishing attacks to assess employee readiness and reinforce email security awareness.
- **Dark Web Monitoring** – Continuous scanning for leaked credentials or sensitive data exposure to mitigate risks before they escalate.

Vulnerability & Physical Security

- **Internal & External Vulnerability Scanning** – Identify weaknesses in your network, devices, and systems before attackers do.
- **Sensitive Data Scanning** – Locate and protect confidential information, including credit card data and personal identifiers, on your network.
- **Onsite Physical Security Reviews** – Assess physical access points, device security, and document handling to fortify against real-world threats.

Ongoing Governance &

Proactive Security Operations

- **Continuous Security Oversight** – Our Information Security Program Managers work alongside your team to proactively address threats and ensure long-term security resilience.
- **SOC (Security Operations Center) Services** – Advanced monitoring, OS patching, and script security to protect your IT infrastructure.
- **Dedicated InfoSec Team** – What makes Mainstay unique: a team focused on business-aligned security strategies, ensuring your organization remains ahead of emerging threats.
